C. Other Teaching Activities

iGEM Advising (2010-2012)

I was one of three faculty co-founders of Georgia Tech's first synthetic biology team (w/E. Gaucher – Biology – and Mark Styczynski – Chemical and Biological Engineering) and the primary modeling expert & initial fundraiser for the team. The aim of iGEM is to have students design, build and analyze a synthetic microbe to perform a specific task. In 2010, 15 students participated in the team from April – November, culminating in a Silver Medal in the 2010 iGEM jamboree with a project to develop an improved cold-shock response in bacteria. In 2011, we selected new team members, raised >10K in funds with a project focus on CRISPRs (an adaptive immune defense in bacteria). The team won a Bronze medal for their contributions. Both years the team met on a weekly basis for a 4 month period with additional preparation for the multi-team competition. iGEM is an ongoing fixture at Georgia Tech.
